

Oil Token (OIL) — White Paper

Digital Gateway to Crude Oil

Introduction

Oil Token (OIL) is a TIP-3 token on the TON blockchain.

Each unit represents one barrel of crude oil.

It provides secure, transparent, and global access to the digital oil market.

Roadmap

Phase 0 — Launch: Deploy Jetton contract, publish metadata, list in wallets, provide DEX liquidity.

Phase 1 — Accessibility: List on major DEX, activate community, attract holders, AMA sessions.

Phase 2 — Adoption: Partnerships with Web3, integrate into services, build payment tools.

Phase 3 — Expansion: Strengthen liquidity, CEX listings, smart contract audit.

Tokenomics

Total Supply: 10,000,000,000 tokens

Locked Supply (50%): 5,000,000,000 tokens — released over ~11 years

Initial Distribution: 1,000,000,000 tokens to Tonkeeper holders

Remaining Tokens: 4,000,000,000 distributed as Airdrops, Public Sale, Team & Community
